

Approaches to a Non-Continuum Optics

TEILI

Author: Michael Nitsche

- 0. Introduction
- 1. Preliminary remarks on a non-longer optics
- 2. About the metric of the energy momentum space
 - 2.1 Structure of the energy momentum space
 - 2.2 Effect propagation and principle of relativity
 - 2.3 Intrinsic time calculation
- 3. On the concept of transition probability
- 4. Principles of the type of matter
 - 4.1 Binding types and transition probabilities
 - 4.2 The wave character of moving matter
 - 4.3 Principles of electron shells
- 5. Photon type principles
 - 5.1 Transition probabilities and wave character
 - 5.2 Examples of light propagation in matter
 - 5.2.1 Group and phase velocity, absorption
 - 5.2.2 Refraction
 - 5.2.3 Reflection at the optically denser medium
 - 5.2.4 Total reflection and reflection at the optically thinner medium
 - 5.2.5 Interference of photons
 - 5.2.6 Light in electric and magnetic fields
 - 5.2.7 Diffraction of photons
 - 5.3 Examples of the interaction of photons with matter
 - 5.3.1 Photon and electron
- 6. Literature
